How to type-set Fitch natural deductions using
GNU troff, pic and eqn

Sigrid Lundberg
sigfrid (at) sigfrid-lundberg.se

Introduction

Fitch is a notation for natural deduction (Pelletier and Hazen, 2024), and `troff` is a software system for type-setting using Unix™ and related operating systems (Ossanna and Kernighan, 1994). Brian W. Kernighan was one of the creators of Unix and the C programming language. pic is a system for typesetting graphs, also created by Kernighan (1982). GROFF AKA GNU troff is the implementation I am using (FSF, 1990). There are other competitors, but this is the version I use.

The Fitch notations has got its name after its inventor, Fredric Fitch. This notation seems to be a de facto standard: It is used in all the text books I have been able to find electronically, and seems to be taught at logics courses in mathematics as well as philosophy. I wrote this note while learning Fitch; I used the writing was a method for learning. My intention is to demonstrate how to format natural deduction on this platform. I cannot teach you how to format scientific text, neither can I give an introduction to natural deduction.

```
set_steps_and_depths(8,3)

start_proof(START);
add_premis(START,"A∨B");
add_premis(START,"¬A");
premis_end(START);

start_proof(SUB1);
add_premis(SUB1,"A");
premis_end(SUB1);
add_step(SUB1,"⊥","⊥ Intro: 3,2");
add_step(SUB1,"B","⊥ Elim: 4");
end_proof(SUB1);

start_proof(SUB2);
add_premis(SUB2,"B");
premis_end(SUB2);
add_step(SUB2,"B","Reit: 6");
end_proof(SUB2);

add_step(START,"B","∨ Elim: 6-7,3-5,1");
end_proof(START)
```
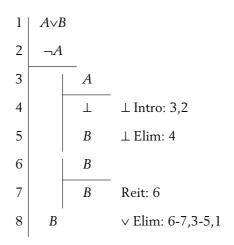

Figure 2. The PIC code needed to generate Figure 1.

```
1 │ A∨B
2 │  ¬A
          ┌─────
3 │       │ A
          │ ┌────
4 │       │ │ ⊥      ⊥ Intro: 3,2
5 │       │ │ B      ⊥ Elim: 4
          │ ┌────
6 │       │ │ B
7 │       │ │ B      Reit: 6
8 │    B          ∨ Elim: 6-7,3-5,1
```

Figure 1. Proof that $A \lor B, \neg A \therefore B$.
